

Audion - Visuals

Technical Requirements

- A bit of space for the laptop and controllers,
- A working CAT 5 cable to Matts computer on stage
- A power plug
- Connector to the visual system

To prepare the software and hardware best possible for the setup, it would be important to know:

- What kind of visual system are you using? (LED, etc)
- What is the video resolution we need to provide for your system? (eg.1920x1080, etc.)
- How does the morphing of the video image happen? This can be done in your system, or we can do it in our system. Ideally we talk about this before hand.
- What connector type do we use to plug into the system? (HDMI, DVI, VGA)
- If we do a changeover between other acts, how much time to we have for this and how does the signal switch happen? (videomixer?)
- And lastly, if available, it would be nice to have a picture or a rendering from the stage to see how everything comes together.
